In this E470 Canon printer wifi setup video, I will share instructions on how to connect E470 to a router.

Canon Pixma E470 is an inkjet printer that comes with Wifi and USB support. You can either use it on your PC or Laptop by directly connecting it via a USB cable. Or you can connect it to your router and share it on the office network. Canon Pixma E470 is extremely convenient to use a color printer. The challenging part is setting up the printer on the Wifi network.

In this video, I had shared step-by-step instructions on how to connect this printer to a router and access it on any PC or Laptop on the same network. Do not forget to watch it till the end. Do motivate us by liking this video and subscribing to TechNClub.

Hi. I'm trying to setup a Canon E471 wireless printer. Canon pointed me to the E470 when I searched for help on the E471, so I'm figuring the instructions are similar. My problem is the box did not contain the cable to connect to my laptop for me to setup the software on my laptop. I saw the instructions for direct connecting to an Android smartphone, but is there another way to connect the printer to my WIFI network if I don't have that cable? If I need to download the software, I'm using a Chromebook. Thanks.
